

Employment and Industry Outcomes

Owens Community College

Summer 2010 through Spring 2015

Brian Stamper and Kristin Harlow

Center for Human Resource Research, The Ohio State University

The Ohio Longitudinal Data Archive is a project of Ohio Analytics and the Ohio Education Research Center (oerc.osu.edu) and provides researchers with centralized access to administrative data. The OLDA is managed by The Ohio State University's Center for Human Resource Research (chrr.osu.edu) in collaboration with Ohio's state workforce and education agencies (ohioanalytics.gov), with those agencies providing oversight and funding. For information on OLDA sponsors, see <http://chrr.osu.edu/projects/ohio-longitudinal-data-archive>.

Description

This report provides employment outcomes and industry of employment for graduates and certificate completers by program, as identified in ODHE's Higher Education Information System (HEI), for graduates and certificate completers who finish during the terms summer 2010 through spring 2015.

The first section describes employment outcomes two and four quarters after graduation, including the number of graduates found working in Ohio and the median earnings of those individuals. The first table in this section gives this information for all graduates of this institution, separated by degree. The second table further divides this data by campus (for four-year universities) and program by Classification of Instructional Programs (CIP) code.

The second section reports the number employed in Ohio two quarters after graduation and a breakdown of industry of employment for those groups. As in the first section, the first table summarizes the data by degree level only and the second table lists this data for each program, by degree level and campus.

Methods

Individual graduates and certificate completers were identified through HEI. HEI provides the level of degree, term of graduation, and the subject of the degree (by CIP code). In addition, for all four-year schools (except Ohio State), HEI provides the campus from which the individual graduated. Using these variables we identified the individuals graduating or completing a certificate by level, subject, and campus. An individual may appear in more than one category. For example, if an individual earned a bachelor's degree in both math and biology, the person would be included in the number of graduates in both groups.

However, an individual will only be counted one time in each category. For example, if an individual earns two certificates in welding at the same campus, the person would only be counted once. If a person earns multiple degrees or certificates, earnings are calculated two and four quarters after the most recent degree or certificate earned between summer 2010 and spring 2015.

The earnings and industry of employment of individual graduates and completers were identified by matching the individuals identified in HEI with administrative records from the Unemployment Insurance (UI) system. The Ohio Department of Job and Family Services collect quarterly earnings from all employers in Ohio who are required to report to the UI system, including the industry of that employer (categorized by North American Industry Classification System (NAICS) code). As a result, the UI wage data include only those individuals working in Ohio who are neither Federal employees nor self-employed; those groups of individuals do not pay into Ohio's unemployment insurance system, and thus are not captured by the UI administrative data. For reference, in Ohio in 2010 about 1.5% of workers were Federal employees, and about 5% of workers were self-employed.¹ Earnings are reported as a median, to avoid skewing high due to one high earner. In addition, zero earnings are not included in calculating the median because zero earnings indicates that the individual is not employed in Ohio.

Note that OERC reports outcomes only for groups of 10 or more individuals, to avoid re-identification of any particular individual. In the employment outcomes sections this has been handled in some cases by grouping programs into categories as "Other". In cases where the "other" grouping still has fewer than 10 individuals, the data is replaced by "***". The industry reports generally include the five largest industries, but in some cases there are fewer than five because the number of graduates working in a given industry is less than 10.
